WHO WE ARE

**WELCOME TO VETRO POWER.
A TECHNOLOGY COMPANY BUILT
ON HEART AND INNOVATION**

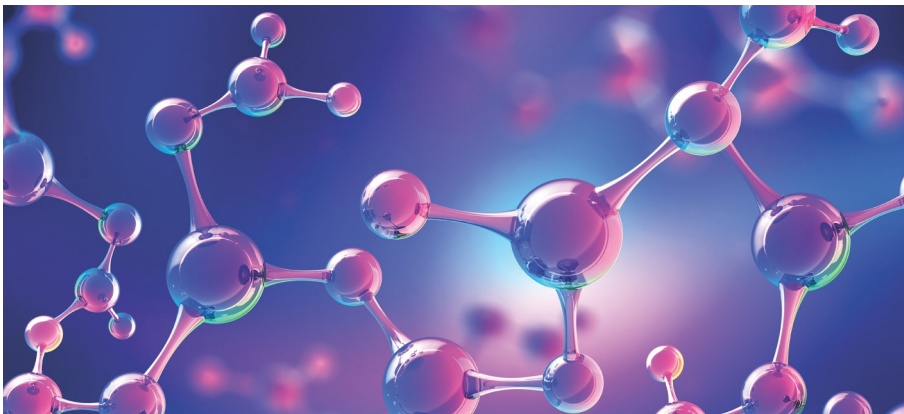

From protection to care to preservation, we create top-of-the-line nano-tech and clean-tech products that keep you safe and make your belongings last longer - paving the way for a sustainable future.

At Vetro Power, we're focused to equip you with effective products that enhance your lifestyle while remaining conscious of the world we coexist in. We care for our consumers, their valuables and the environment.

NANOTECHNOLOGY

Nanotechnology is a field of research concerned with building & manipulating 'things' - materials, devices, surfaces; on the scale of atoms & molecules. A nanometre is a billionth of a metre, eg. the diameter of a human hair is on average 80,000 nanometres. At such scales, materials can be manipulated & re-engineered as the ordinary rules of physics & chemistry no longer apply.

THE LOTUS EFFECT & SUPERHYDROPHOBICITY:

The revolutionary nanotechnology behind Vetro Power's Protector products channel 'The Lotus Effect'. This refers to the high degree of water repellency & self-cleaning properties exhibited by the Superhydrophobic lotus leaves. Lotus leaves by nature have nano-hair particles that prevent water from settling onto the surface, causing droplets to bead up and roll off, while minimising adhesion of dirt, dust & grime.

Superhydrophobic surfaces are exceedingly difficult to wet. Adding a superhydrophobic layer to a textile surface makes it liquid repellent, thereby reducing wetness and blocking stains from seeping in. Contact angles of water droplets on a Vetro Power Superhydrophobic surface exceeds 150°. Tilting the surface slightly, will cause them to roll off.

SCIENCE & TECHNOLOGY
VETRO POWER

Vetro Power's Protector products create invisible, long-term protective coatings that are powered by Nanotechnology to increase the efficiency, durability & repellence of a surface; with Superhydrophobicity using 'The Lotus Effect'. This innovation will have a positive impact on many facets of life.

LOTUS EFFECT

Instead of opting for Protector products with highly toxic synthetic materials that pose a serious health risk, both to you and our environment, choose Vetro Power's **NON-TOXIC, LONG-LASTING, FLUOROCARBON-FREE NANO-TECH** enhanced Fabric Protector products.

SUPERHYDROPHOBIC SURFACES

SCIENCE & TECHNOLOGY

FEATURES

MAINTAINS
BREATHABILITY

NON-TOXIC

Our proprietary, eco-friendly & non-toxic set of Fabric Protector products are manufactured & developed in partnership with leading laboratories & institutions in Germany & India, earning global certifications & awards for their innovations. These high-performance Fabric Protectors are multifunctional, applicable on a variety of textile-based surfaces and outperform generic protective coatings. Using only a natural substance, Silicon Dioxide (found commonly in sand or quartz); Vetro Power has created a safe, affordable & eco-friendly Fabric Protector that surpasses any mainstream Fabric Protector in performance & durability, whilst not causing any harm to our bodies or the environment.

AREAS OF APPLICATION

YOUR INSURANCE AGAINST STAINS
For Homes - Restaurants - Hotels - Transport - Other

Once you book a session with our team, we'll assess your home and business and get it coated by a team of trained professionals. Our clinically tested solution will be sprayed on a variety of surfaces - with no fumes or harmful chemicals to get in your way. After it sets, you can say goodbye to worrying about

HVLP (High Volume Low Pressure) Coating vs Manual Spraying

Our team uses only HVLP sprayers, also called turbo-sprayers. This professional spraying equipment is ideal for achieving a smooth finish across surfaces. This high speed technique is highly accurate, and unlike manual spraying, it prevents any 'overspray', i.e. excess coating that collects on and around the sprayed surfaces. It doesn't spray the coating into the air like aerosols, which is more efficient, reducing consumption and saving costs. HVLP thus avoids unnecessary accumulation, giving you a thin, invisible layer with a wide spread and higher degree of liquid repellency.

ADVANTAGES OVER COMMON FABRIC PROTECTORS

Protecting your valuables & home should not come at the cost of your health or our environment. Vetro Power is committed to sustainable living by providing customers effective, but safe & chemical-free products to enhance their lifestyle. This begins with challenging the status quo within the traditional chemical industry and altering what is considered as best practice.

FEATURES	VETRO POWER FABRIC PROTECTOR PRODUCTS	OTHER BRANDS
Free of dangerous fluorocarbons (like C4, C6, C8)	✓	×
Free of harmful propellants & flammable aerosols that negatively impact the environment	✓	×
Does not block fabric breathability	✓	×
Does not change colour, look or feel of fabric	✓	×
Safe on all colours and fabric types	✓	×
Safe to use around children, pets and people	✓	×
Enhanced durability & repellency upto a year	✓	×
Silicon-Dioxide (SiO ₂) based	✓	×
Liquid, Water, Stain & Spill Repellent	✓	×
Water-based	✓	×
Odourless	✓	×
Food-Safety Standard Certified	✓	×

ADVANTAGES OVER COMMON FABRIC PROTECTORS

WHY AVOID FLUOROCARBONS (PFCS)

Traditional fabric protectors & water-repellents that have been applied on household fabric & upholstery surfaces for the last few decades contain Per-and polyfluoroalkyl substances (PFAS); a group of highly toxic man-made chemicals that include PFOA, PFOS, GenX and many other chemicals. PFAS have been manufactured and used in a variety of industries around the globe since the 1940s. PFOA and PFOS have been the most extensively produced and studied of these chemicals. Both chemicals are very persistent in the environment and in the human body - meaning they don't break down and they can accumulate over time. There is evidence that exposure to PFAS can lead to adverse human health effects like cancer, reproductive problems, weakened immunity and diseases like thyroid disease, high cholesterol, kidney and liver damage - and even reduce the effectiveness of vaccines! But not to worry,

VETRO POWER'S PROTECTOR PRODUCTS ARE STRICTLY PFAS-FREE.

WHY USE SILICON DIOXIDE (SiO₂)

Silicon Dioxide is an inert substance that surrounds us in nature as sand or quartz; the most abundant family of materials on Earth. Silicon dioxide is a natural substance that is already in use in many products around us, like glass, concrete, cosmetics, food and even the water we drink. The recent advancements in Vetro Power' Nanotechnology have allowed to alter Silicon Dioxide into its nanoparticle form creating such a thin, malleable layer that it could be used as an effective protection barrier on different surfaces.

TESTING STANDARDS

To learn about our rigorous testing standards, reach out to us at customercare@vetropower.com or call +91-887-900-9911

BOOK YOUR COATING SERVICE TODAY

TALK TO THE TEAM

We will conduct a site inspection to understand the requirements of your home or business and see how we can best serve you.

APPLICATION OF FABRIC & UPHOLSTERY PROTECTION

Our team of trained professionals will come in and coat your location with our protective solution.

VETRO POWER PROTECTION CERTIFIED

Vetro Power Fabric & Upholstery Protection takes an hour to set; the best practice is to leave it untouched for 24 hours and you're protected from liquid, water, stains and spills for 9-12 months.

SEE YOU AGAIN IN 9-12 MONTHS

Our team will be in touch again for a re-application at your home or business. Reach out to our team for a customised plan, AMC plan, or PRO plan with a longer-term solution.
